

One discovered abstraction is the agent — it tiles every (gv, av) belief task

Rows are the (goal-value, agent-value) combinations the curriculum poses; columns are the invented library abstractions. A cell counts solved belief programs whose rewritten form uses that abstraction — the agent-creator column is filled for every combination.

Phase 1 — atomic fork/sync (agent constructor: fn_11)

Phase 2 — decomposed plumbing (agent constructor: fn_7)
