

One discovered abstraction is the agent — it tiles every (gv, av) belief task

Rows are the (goal-value, agent-value) combinations the curriculum poses; columns are the invented library abstractions. A cell counts solved belief programs whose rewritten form uses that abstraction — the agent-creator column is filled for every combination.

Phase 1 — atomic fork/sync (agent constructor: fn_6)

(gv, av)	fn_6	fn_7	fn_8	fn_9	fn_10	fn_11	variants
gv1·av7	5	1	4	6	2		▲ ● ■ ◆
gv2·av1	12	4	4	2	2	2	★ ▲ ● ■ ◆
gv4·av9	10	5	5	3	2		★ ▲ ● ■ ◆
gv5·av4	11	4	4	3	2	1	★ ▲ ● ■ ◆
gv6·av2	7	2	5	5	2	4	★ ▲ ● ■ ◆
gv7·av6	12	6	5	1	2	2	★ ▲ ● ■ ◆
gv8·av5	7	3	6	5	2	2	★ ▲ ● ■ ◆
gv9·av8	10	3	4	5	2		★ ▲ ● ■ ◆
